Toolvip24 n 2018-1-IT01-KA202-006730-PIC948464934

Vocational counselors use this tool available at our school (ZSAE) to test professional predispositions. The developer of this tool is the Nowa Era publishing house. The education department of the city hall passed this tool on to the school without compensation. Counselors use them during their working hours with students. Unfortunately, there are very few of them in technical secondary schools. 10 hours in a four-year teaching period per class."Castle"(ZAMEK) - a tool for examining professional predispositions

The ZAMEK diagnostic tool is used to test the professional predispositions of students of junior high schools, high schools, and other educational system institutions, including vocational students. The guiding idea in the process of developing a diagnostic tool were the assumptions of Mark Savickas's narrative theory of career counseling, according to which the identification of professional predispositions effective and correlating with the current labour market conditions should include the following components:

1. Diagnosis of professional personality based on RAISEC personality types (vocational personality);
2. Recognition of a person's psychosocial readiness and resources to deal with current and future changes and challenges in career adaptability;
3. Individual, based on reflection and discussion, exploring the subjective narrative of the subject, concerning his desires, ideas, professional interests (English: life themes).

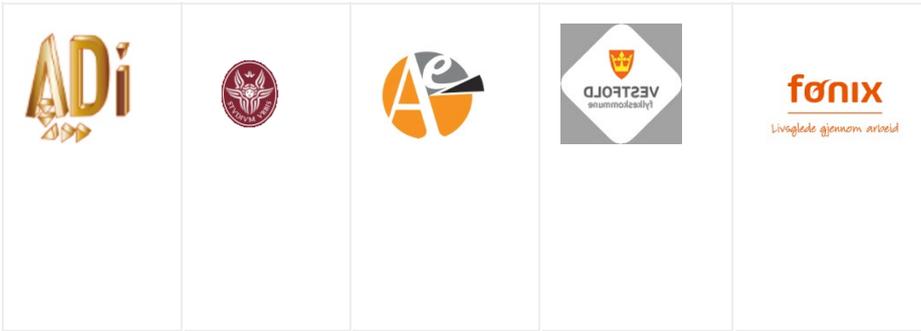

The tool, thanks to the use of a comic book formula, is an attractive - especially for young people - a tool that allows the diagnosis of the dominant type of behavior (professional personality) and the related professional predispositions. The test results allow the test person to recommend the types of work and to indicate the professions (according to the classification of professions for vocational education) related to them, which the test person could perform. The choices made by the examined person in the subsequent parts of the test are in-depth (more reflective) choices through the possibility of identification with the heroes of the comic book plot of the test. The test formula also allows, in addition to diagnosing professional predispositions, to acquire basic knowledge about the requirements and conditions of performing specific professions (apart from the diagnosis, it is an important educational value of the test).

Tool additions:

- The title "Castle" - recognition of professional predispositions. A guide for schoolgirls and students
- The title "Castle" - recognition of professional predispositions. Methodical and information materials and tools for teachers, career counselors, psychologists, educators and parents
- The title "Castle" - training scenario in the use of project tools for the diagnosis of professional predispositions

- The title "Castle" - cards of professions and professional qualifications (methodical and information materials in the form of 201 cards for 318 professions and a diagram of the vocational education path)
